HTML Review Notes

Madison,

Great work setting up the html framework. I'm truly amazed by how this is coming to life. Here are a couple of small things that I noticed reviewing the site.

- **Content**: Though the current minimalistic design layout works, please find some images to complement the text elements to make the site more interesting to browse through.

- **Nav Bar Design**: The placement of the sub-site links seems a bit out of place when in full window view. Please consider making the following changes as you see fit.
  - Making it vertically centered relative to the nav bar
  - Using slightly bigger font size
  - Placing the navigation tabs to the right more (something like "float: right" with appropriate margin would work).

- **History Timeline**:
  - Please feel free to omit or truncate the less important timeline info, as the current timeline seems a bit too long.
  - Please also considering utilizing the white space to the right, perhaps adding photo elements there or centering the timeline design, or both would help to solve the problem.
  - When viewing in smaller window size, the timeline seems to be overlapping with each other. Please consider using responsive design.

- **Home Page**
  - I think the home page can benefit a lot from using responsive/animating design elements. Please consider adding navigational functions to the "KODAK" text elements on the home page(if clicked, smooth scroll to the company intro).
  - The placement of the nav bar seem a bit awkward to use. Explore other placements like the top right corner as you see fit. A slightly bigger font size would also help. Here's just another thought, if you have time to explore, organize the elements on the home page and place it in a way that would resemble the classic kodak camera/ logo.
  - Please consider utilizing the hover effect to decorate the navigation links and other home page elements.
